# GCSE CHEMISTRY

Higher Tier Paper 2

Tuesday 13 June 2023 Morning Time allowed: 1 hour 45 minutes

#### **Materials**

For this paper you must have:

- a ruler
- · a scientific calculator
- the periodic table (enclosed).

#### Instructions

- Use black ink or black ball-point pen.
- Pencil should only be used for drawing.
- Fill in the boxes at the top of this page.
- Answer **all** questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do all rough work in this book. Cross through any work you do not want to be marked.
- In all calculations, show clearly how you work out your answer.

### Information

- The maximum mark for this paper is 100.
- The marks for questions are shown in brackets.
- You are expected to use a calculator where appropriate.
- You are reminded of the need for good English and clear presentation in your answers.

For Examiner's Use

TOTAL		

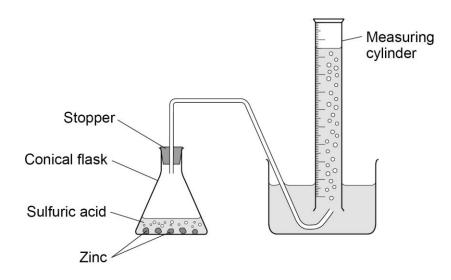

A student investigated the rate of the reaction between zinc and sulfuric acid.

Hydrogen gas is produced during this reaction.

Figure 1 shows the apparatus.

Figure 1

This is the method used.

- 1. Add 50 cm<sup>3</sup> of sulfuric acid to a conical flask.
- 2. Add 2.0 g of zinc to the conical flask.
- 3. Quickly put a stopper in the conical flask and start a timer.
- 4. Measure the time taken to collect 20 cm<sup>3</sup> of gas.
- 5. Repeat steps 1 to 4 three more times.

0 1 . 1

Suggest why the stopper must be put in the conical flask as quickly as possible in **step 3**.

[1 mark]

to reduce the escape of gas

0 1 . 2

The student calculated the rate of the reaction for each trial.

**Table 1** shows the results of the calculations.

Table 1

	Trial 1	Trial 2	Trial 3	Trial 4
Rate of reaction in cm³/s	0.78	0.81	0.68	0.81

Determine the mean time taken to collect 20 cm<sup>3</sup> of gas.

Do not include any anomalous results.

Use the equation:

mean rate of reaction = 
$$\frac{\text{volume of gas collect} \in d}{\text{mean time taken}}$$

[5 marks]

mean rate = 
$$0.78 + 0.81 + 0.81$$

3

0.80 (cm3/s)

0.80 = 20

mean time taken

mean time taken = 20

0.80

= 25 (s)

Mean time taken = \_\_\_\_

s

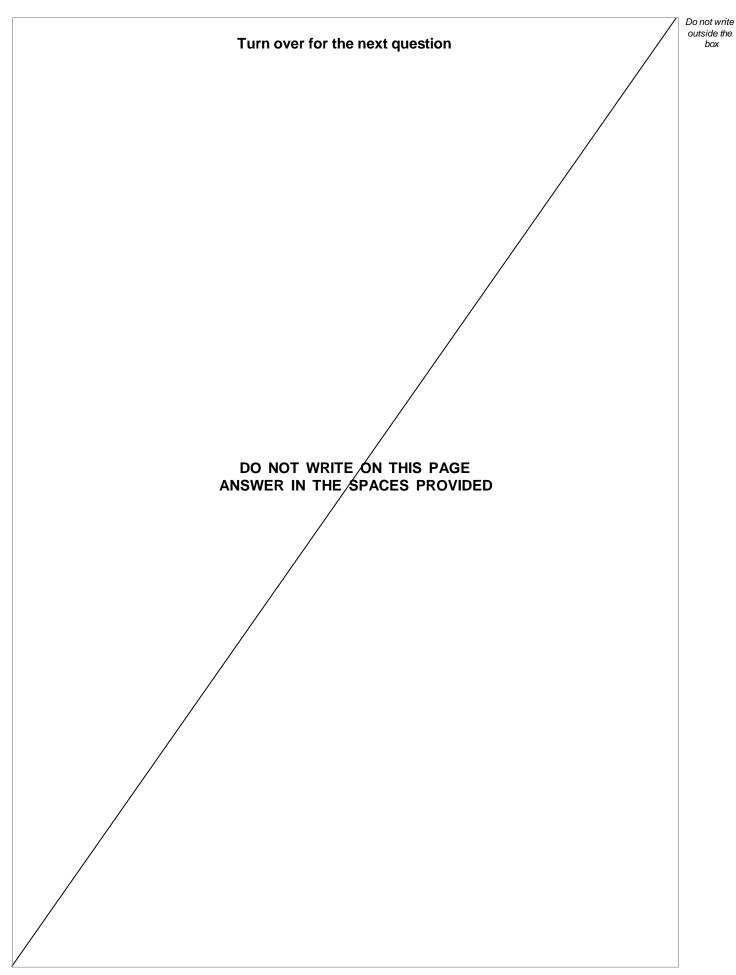

Question 1 continues on the next page

Do not write outside the box

0 1.3	The student changed the investigation so that the mean time taken to collect 20 cm <sup>3</sup> of gas was greater.		
	Which <b>two</b> changes would increase the mean time taken to collect 20 cm <sup>3</sup> of gas?  [2 marks]		
	Tick (✓) <b>two</b> boxes.	[Z marks]	
	Use a catalyst		
	Use a larger conical flask		
	Use a lower temperature		
	Use smaller pieces of zinc		
	Use sulfuric acid of a lower concentration		
0   1 . 4	Hydrogen gas is produced during this reaction.		
	Describe the test for hydrogen gas.		
	Give the result of the test.	[2 marks]	
	Test burning / lit splint		
	Result <u>burns with a (squeaky) pop sound</u>		
			10

This question is about alcohols and carboxylic acids.

Alcohols are used as fuels.

A student burned 1.00 g of six alcohols and determined the energy released from each.

Table 2 shows the results.

Table 2

Alcohol	Formula of one molecule of the alcohol	Energy released in kJ/g
Ethanol	C₂H₅OH	29.6
Propanol	C₃H <sub>7</sub> OH	33.6
Butanol	C <sub>4</sub> H <sub>9</sub> OH	36.1
Pentanol	C₅H <sub>11</sub> OH	37.7
Hexanol	C <sub>6</sub> H <sub>13</sub> OH	38.9
Heptanol	C <sub>7</sub> H <sub>15</sub> OH	39.8

0	2

1 Calculate the mass of ethanol that must be burned to release the same amount of energy as burning 1.00 g of heptanol.

[2 marks]

$$mass = 39.8 (x1)$$

$$= 1.34 (g)$$

0 2

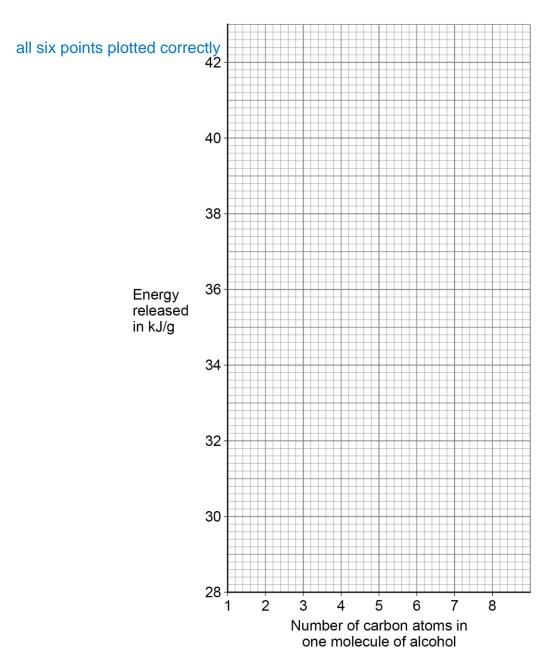

The energy released in kJ/g varies with the number of carbon atoms in one molecule of each alcohol.

Plot the data from Table 2 on Figure 2.

[2 marks]

g

**0 2** . **3** Estimate the energy released in kJ when 1.00 g of octanol (C<sub>8</sub>H<sub>17</sub>OH) is burned. Use **Figure 2**.

[1 mark]

Energy released =  $\frac{40.6}{}$  kJ

	8arbon dioxide is produced when alcohols are burned.  Carbon dioxide is identified by bubbling the gas through limewater.
0 2 . 4	Complete the sentence.  Choose the answer from the box.  [1 mark]
	calcium chloride calcium hydroxide calcium nitrate calcium sulfate
	Limewater is an aqueous solution of <u>calcium hydroxide</u> .
0 2 . 5	Give the result of the test when carbon dioxide is bubbled through limewater.  [1 mark]  (limewater turns) milky / cloudy

	Ethanoic acid can be produced from ethanol.	•
0 2 . 6	What is reacted with ethanol to produce ethanoic acid?  Tick (✓) one box.  [1 mark]	
	A halogen	
	An alkali metal	
	An oxidising agent	
	Water	
	•	
0 2 . 7	Ethanoic acid contains the functional group –COOH	
	Complete the displayed structural formula of this functional group.  [1 mark]	
	— C <u>—</u> O	
	O — H	
	Question 2 continues on the next page	

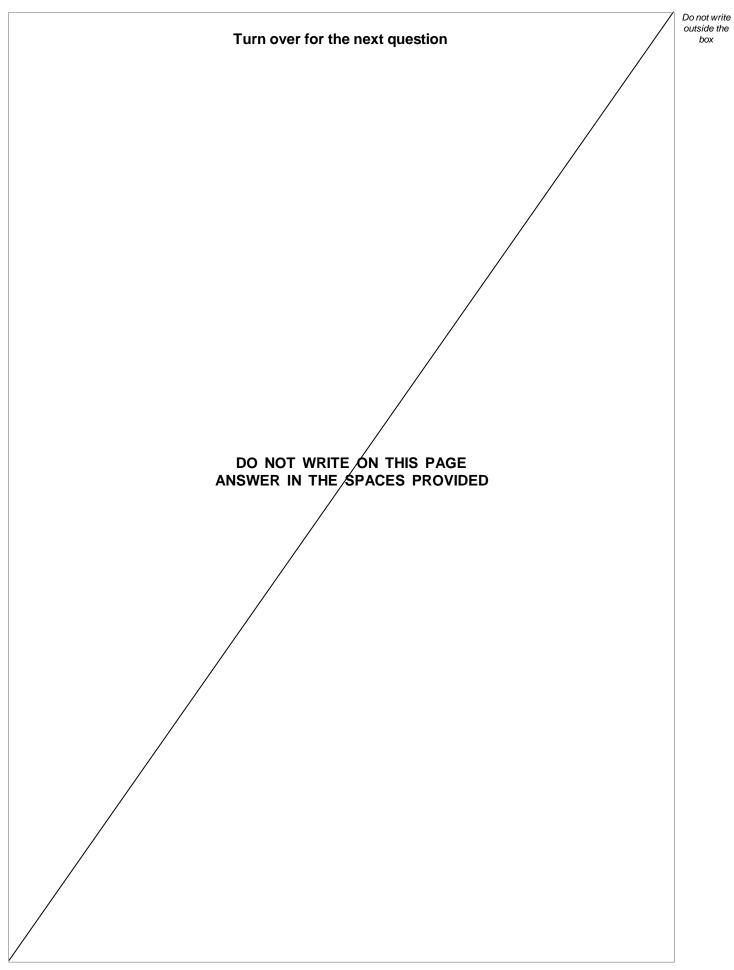

0 | 2 . 8 Ethanoic acid reacts with different compounds.

Draw **one** line from each compound to a product of the reaction of the compound with ethanoic acid.

[2 marks]

This question is about chemical analysis.

Potassium bromide is used in medicine.

A scientist tested a sample of medicine to show the presence of potassium ions and of bromide ions.

The sample is soluble in water.

0 3.1

Plan a method the scientist could use to show that the sample of medicine contains potassium ions **and** bromide ions.

The scientist has:

- a Bunsen burner
- · a metal wire
- test tubes
- a dropping pipette
- · distilled water
- dilute nitric acid
- silver nitrate solution.

You should give the results of the tests.

[6 marks]

(potassium ions)

- place sample on (clean metal) wire
- introduce into (blue / non-luminous) flame
- using (Bunsen) burner
- observe lilac flame colour
- which shows presence of potassium (ions)

(bromide ions)

- dissolve sample
- in (distilled) water
- in test tube
- add (dilute) nitric acid
  - add silver nitrate (solution)
  - using (dropping) pipette
  - observe cream precipitate (formed after addition of silver nitrate solution)
  - which shows presence of bromide (ions)

Do not write outside the box

8

The scientist could also use an instrumental method to show the presence of potassium ions in the medicine.

0 3

Which instrumental method could be used to show the presence of potassium ions in the medicine?

[1 mark]

flame emission spectroscopy

0 3.

Give **one** advantage of using this instrumental method instead of a chemical test.

[1 mark]

(more) accurate

Turn over for the next question

This question is about greenhouse gases and climate change.	
Carbon dioxide and methane are greenhouse gases.	
Which of the following is also a greenhouse gas?  Tick (✓) one box.	[1 mark]
Chlorine  Nitrogen  Oxygen  Water vapour	
In the past 50 years, there has been an increase in:  • the world population  • the concentration of carbon dioxide in the atmosphere  • the concentration of methane in the atmosphere  • the mean temperature of the atmosphere at the Earth's surface.  Most scientists think this information can be used to explain climate change.  Explain why the increase in world population may have caused the increase concentration of carbon dioxide in the atmosphere.  (increased population so) more energy required  (so) more (fossil) fuels burned	in the [2 marks]
	Carbon dioxide and methane are greenhouse gases.  Which of the following is also a greenhouse gas?  Tick ( ) one box.  Chlorine  Nitrogen  Oxygen  Water vapour  In the past 50 years, there has been an increase in:  • the world population  • the concentration of carbon dioxide in the atmosphere  • the concentration of methane in the atmosphere  • the mean temperature of the atmosphere at the Earth's surface.  Most scientists think this information can be used to explain climate change.  Explain why the increase in world population may have caused the increase concentration of carbon dioxide in the atmosphere.  (increased population so) more energy required</th

Do not write outside the box

	13
0   4	Explain why the increase in world population may have caused the increase in the concentration of methane in the atmosphere.  [2 marks]
·	(increased population so) more food required
	(so) more methane-producing food production
. 4	Describe <b>two</b> potential effects of the increase in the mean temperature of the atmosphere at the Earth's surface.  [2 marks]
I	1 melting ice
	2 rising sea levels
0 4 . 5	The mean temperature of the atmosphere at the Earth's surface has increased.
	Most scientists think that this has been caused by an increase in the concentration of greenhouse gases in the atmosphere.

there may be other reasons for changes in the (mean) temperature [1 mark] (of the atmosphere at the Earth's surface)

0 5	Copper is extracted from metal ores.  Chalcopyrite is a metal ore containing a compound with the formula CuFeS <sub>2</sub>
0 5.1	$CuFeS_2$ reacts with oxygen to produce copper(II) sulfate and iron(II) sulfate. Complete the equation for this reaction.
	You should balance the equation.
	CuFeS <sub>2</sub> + $\frac{402}{}$ $\rightarrow$ CuSO <sub>4</sub> + FeSO <sub>4</sub>
0 5 . 2	Calculate the percentage by mass of copper in $CuFeS_2$ Relative atomic masses ( $A_r$ ): $S=32$ $Fe=56$ $Cu=63.5$ [3 marks]
	$(Mr = 63.5 + 56 + (2 \times 32) = 183.5)$
	(% of copper =) 63.5 183.5 × 100
	= 34.6 (%)
	Percentage by mass = %
0 5 . 3	Describe a test to show the presence of copper(II) ions in a solution of copper(II) sulfate.
	Give the result of the test.  [2 marks]
	Test (add) sodium hydroxide (solution)

Result blue precipitate

0 5 . 4 Copper can be extracted from low-grade ores by bioleaching.	Do not write outside the box
Describe what is meant by bioleaching.  [2 marks]	
(the use of) bacteria to produce leachate solutions (that contain metal / copper compounds)	
	9

Turn over for the next question

This question is about chromatography.

A student investigated an orange food colouring using two different types of chromatography paper.

The food colouring:

- · contained a mixture of red and yellow dyes
- · was soluble in water.

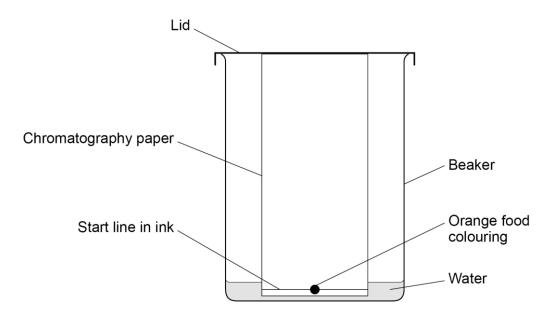

This is the method used.

- 1. Draw a start line on a piece of type **A** chromatography paper.
- 2. Put a spot of orange food colouring on the line.
- 3. Put the paper into a beaker containing water as a solvent.
- 4. Wait for the water to travel up the paper.
- 5. Measure the distance above the start line moved by the red and yellow dyes and the water.
- 6. Repeat steps 1 to 5 using type **B** chromatography paper.

Figure 3 shows how the student set up the apparatus.

Figure 3

0 6. The student made **two** mistakes when setting up the apparatus.

Give two mistakes the student made.

[2 marks]

- the start line is drawn in ink
- 2 the start line is below the water level

Question 6 continues on the next page

Another student set up the apparatus correctly.

Table 3 shows the results.

Table 3

	Type A chromatography paper		Type B chromatography paper	
	Red dye Yellow dye		Red dye	Yellow dye
Distance moved by dye in cm	4.8	6.6	5.4	х
Distance moved by water in cm	12.0	12.0	12.0	12.0
R <sub>f</sub> value	0.40	0.55	0.45	0.60

Determine value X in Table 3.

[3 marks]

0.60 = distance moved by dye

12.0

distance moved by dye = 0.60 × 12.0

= 7.2 (cm)

X = \_\_\_\_ cm

	Changing the type of chromatography paper resulted in different $R_{\text{f}}$ values for the red dye.	Do ou
0 6 . 3	Explain why the $R_{\mbox{\scriptsize f}}$ values for the red dye are different using the two types of chromatography paper.	
	Use <b>Table 3</b> . [3 marks]	
	the Rf value is smaller for Paper A	
	(because the red dye) is more attracted to Paper A (than to Paper B)	
	(so the red dye) spends a greater (proportion of the) time distributed in Paper	
	A (than in Paper B)	
0 6 . 4	What other change to the investigation could result in a different $R_{\rm f}$ value for the red dye?	
	use a different solvent [1 mark]	
	Turn over for the next question	

0 7	Manganese dioxide catalyses the decomposition of hydrogen peroxide solution.  Oxygen and water are produced.	Do not writ outside the box
0 7.1	Explain how a manganese dioxide catalyst increases the rate of decomposition of hydrogen peroxide.  [2 marks]	
	(a catalyst) provides a different pathway for the reaction	
	(which has a) lower activation energy	
	A student investigated the rate of this reaction.	
	This is the method used.	
	1. Add 50 cm <sup>3</sup> of 2.0 mol/dm <sup>3</sup> hydrogen peroxide solution to a conical flask.	
	2. Add 1.0 g of manganese dioxide to the conical flask.	
	3. Place the conical flask on a balance and start a timer.	
	4. Record the total mass lost from the conical flask every 20 seconds for 180 seconds.	
0 7.2	Explain why the mass of the conical flask and contents decreased.  [2 marks]	
	(oxygen is) a gas (which) escaped from the flask	

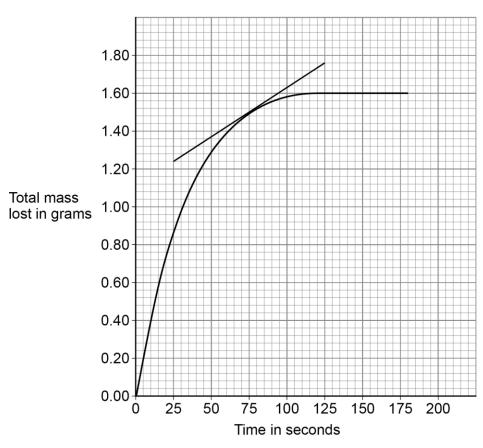

0 7.3

**Figure 4** shows the results for 50 cm<sup>3</sup> of 2.0 mol/dm<sup>3</sup> hydrogen peroxide solution and 1.0 g of manganese dioxide.

A tangent to the line has been drawn at 75 seconds.

Figure 4

Determine the rate of reaction when the time was 75 seconds.

Give your answer to 2 significant figures.

[4 marks]

correct value for x step and y step from tangent

(rate =) value for y step value for x step

correct calculation of rate

answer to 2 significant figures

Rate (2 significant figures) = \_\_\_\_\_ g/s

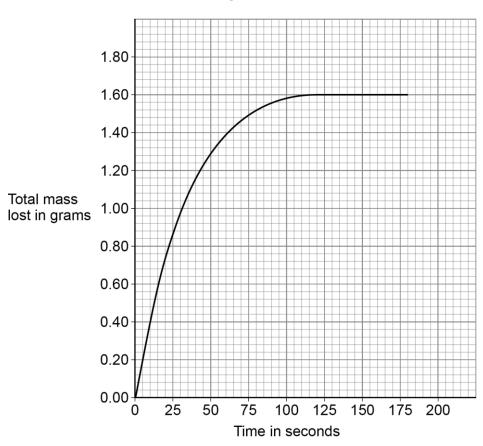

0 | 7

. 4

The results for  $50~\text{cm}^3$  of  $2.0~\text{mol/dm}^3$  hydrogen peroxide solution and 1.0~g of manganese dioxide are shown again on **Figure 5**.

Figure 5

The student repeated the investigation using 50 cm<sup>3</sup> of 1.0 mol/dm<sup>3</sup> hydrogen peroxide solution and 1.0 g of manganese dioxide.

Sketch the expected results for 1.0 mol/dm³ hydrogen peroxide solution on **Figure 5**. [2 marks]

line starting at 0,0 which is less steep than existing line

which becomes level at 0.80 g

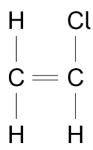

10

0 8 This question is about polymers.

Chloroethene can be used to produce an addition polymer called poly(chloroethene).

The displayed structural formula of chloroethene is

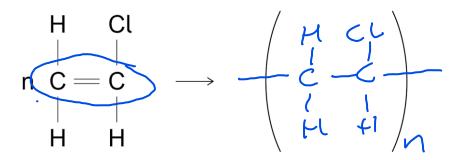

Draw a circle around the functional group on the displayed structural formula that allows chloroethene to produce an addition polymer.

[1 mark]

0 8. 2 Complete the equation for the production of poly(chloroethene) from chloroethene.

[3 marks]

0 8 Poly(ethene) can be strengthened with wood particles to make a building material.

The building material consists of a wood particle reinforcement embedded in a poly(ethene) matrix.

What general name is given to materials like this?

[1 mark]

composites

0 8 . 4

The amino acid beta-alanine has the formula

#### H<sub>2</sub>NCH<sub>2</sub>CH<sub>2</sub>COOH

Beta-alanine polymerises to produce a polypeptide and a small molecule.

Name the small molecule produced when beta-alanine polymerises.

[1 mark]

water

8 0

5

An amino acid can be represented as:

The relative formula mass  $(M_{\rm f})$  of this amino acid is 75

Calculate the relative formula mass of the section of this amino acid molecule represented by

Relative atomic masses ( $A_r$ ): H = 1 C = 12 N = 14 O = 16

[2 marks]

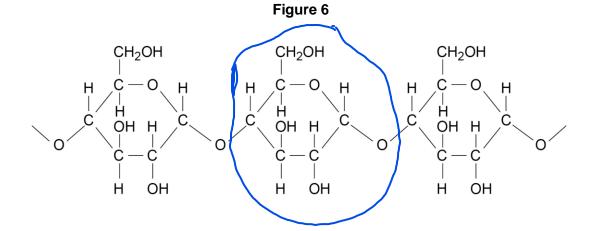

(Mr of NH2 and COOH) =  $(2 \times 1) + 14 + 12 + (2 \times 16) + 1 = 61$ 

Mr of section = 75 - 61 = 14

Relative formula mass =

**Figure 6** represents part of a naturally occurring polymer molecule produced from glucose.

0 | 8 . 6 Draw a circle around the repeating unit in the polymer in **Figure 6**.

[1 mark]

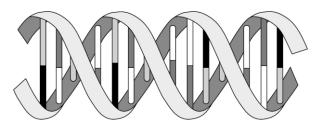

0 8 . 7 Suggest the identity of this polymer.

[1 mark]

starch

Figure 7 represents the structure of a naturally occurring polymer.

Figure 7

Give the general name for the four different monomers which make up the structure shown in **Figure 7**.

[1 mark]

nucleotide

0 8 . 9 Name the **shape** of the structure shown in **Figure 7**.

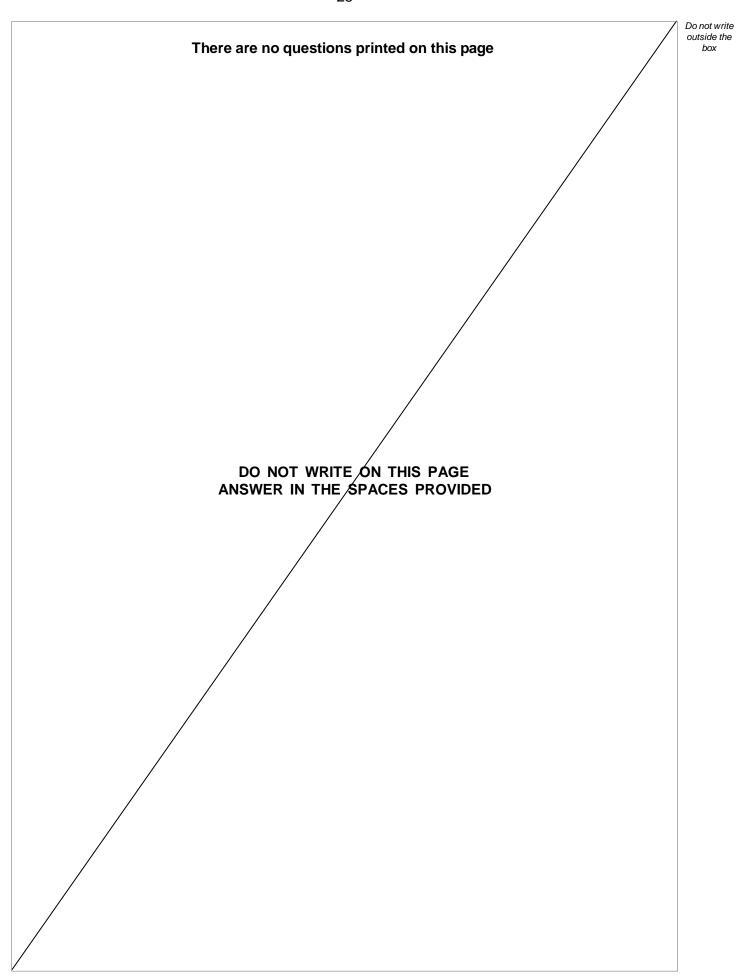

[1 mark]

double helix

- | -

12

This question is about reversible reactions.

When 4.68 g of hydrated copper sulfate changes into anhydrous copper sulfate:

- 2.99 g of anhydrous copper sulfate is produced
- 1.47 kJ of energy is taken in from the surroundings.

The equation for the reversible reaction is:

hydrated copper sulfate ≠ anhydrous copper sulfate + water

0 9 . 1

Calculate the maximum mass of water that can be produced from 11.7 g of hydrated copper sulfate.

[3 marks]

(mass of water in 4.68 g = 4.68 - 2.99)

$$= 1.69 (g)$$

(mass of water in 11.7 g =  $11.7 \times 1.69$ 

$$= 4.23 (g)$$

Mass = q

0 9 . 2

15.0 g of anhydrous copper sulfate completely changes into hydrated copper sulfate when water is added.

Calculate the amount of energy transferred to the surroundings.

[2 marks]

energy = 
$$15.0 \times 1.47$$

2.99

$$= 7.37 (kJ)$$

Energy = \_\_\_\_\_

0 9 . 4	A teacher seals a brown-coloured mixture of nitrogen dioxide and dinitrogen tetroxide in a gas syringe.
	Figure 8 shows the sealed gas syringe.
	Figure 8
	Syringe piston Seal Mixture of gases
	The teacher pushes the syringe piston in.
	This increases the pressure in the gas syringe.
	What is the colour of the mixture when a new equilibrium position is reached?  [1 mark]  Tick (✓) one box.
	The mixture is a darker shade of brown.
	The mixture is the same shade of brown.
	The mixture is a lighter shade of brown.

Question 9 continues on the next page

Hydrogen iodide gas decomposes into hydrogen gas and iodine gas at high temperatures.

The equation for the reaction is:

$$2 HI(g) \rightleftharpoons H_2(g) + I_2(g)$$

0 9 . 5 Explain the effect

Explain the effect of increasing the pressure on the equilibrium position of this reaction.

[2 marks]

no effect on equilibrium position because there are equal numbers of (gas)

moles / molecules on each side of the equation

0 9. Suggest the effect of adding a catalyst on the equilibrium position of this reaction.

[1 mark]

no effect (on equilibrium position)

	Copper forms coloured compounds.	Do OL
	Hydrochloric acid is added to an aqueous solution of copper compound <b>A</b> .	
	The word equation for the reaction is:	
	copper compound <b>A</b> + hydrochloric acid ⇒ copper compound <b>B</b> + water (blue) (yellow)	
0   9   . 7	The reaction mixture is green when both copper compounds are present in a solution at equilibrium.	
	How can the equilibrium position be shifted to make the reaction mixture more yellow?  [1 mark]	
ı	Tick (✓) <b>one</b> box.	
	Add more hydrochloric acid	
	Add more water	
	Leave the reaction mixture for 30 minutes	
0 9 . 8	The concentrations of the substances in this reaction do <b>not</b> change at	
	dynamic equilibrium.	
	Explain why. [2 marks]	
	forward and reverse reactions are taking place at (exactly) the same rate	
		L

This question is about fertilisers.

Compounds of nitrogen (N), phosphorus (P) and potassium (K) are used as fertilisers to improve agricultural productivity.

**Table 4** shows information about three compounds, **A**, **B** and **C**, that can be used as fertilisers.

Table 4

	Compound A	Compound B	Compound C
Name	potassium chloride	ammonium nitrate	diammonium hydrogen phosphate
Formula	KCl	NH <sub>4</sub> NO <sub>3</sub>	(NH <sub>4</sub> ) <sub>2</sub> HPO <sub>4</sub>
Percentage (%) of N, P and K by mass	<b>K</b> : 52%	<b>N</b> : 35%	<b>N</b> : 21% <b>P</b> : 23%
Cost in £/kg	0.24	0.23	0.35

1 0 . 1

A scientist analysed the percentages of nitrogen, phosphorus and potassium in a soil.

The percentages of nitrogen and of potassium in the soil were lower than the percentages needed for high agricultural productivity.

There was sufficient phosphorus in the soil for high agricultural productivity.

Evaluate the use of the compounds in **Table 4** to improve the agricultural productivity of this soil.

reasons [4 marks]

- compound A (potassium chloride) only contains potassium
- compound A (potassium chloride) is the only source of potassium so is needed.
- compound B (ammonium nitrate) only contains nitrogen
- compound B (ammonium nitrate) contains more nitrogen than compound C (diammonium hydrogen phosphate) so is preferable
- compound B (ammonium nitrate) contains more nitrogen and is cheaper than compound C (diammonium hydrogen phosphate) and so is more cost effective

#### judgement

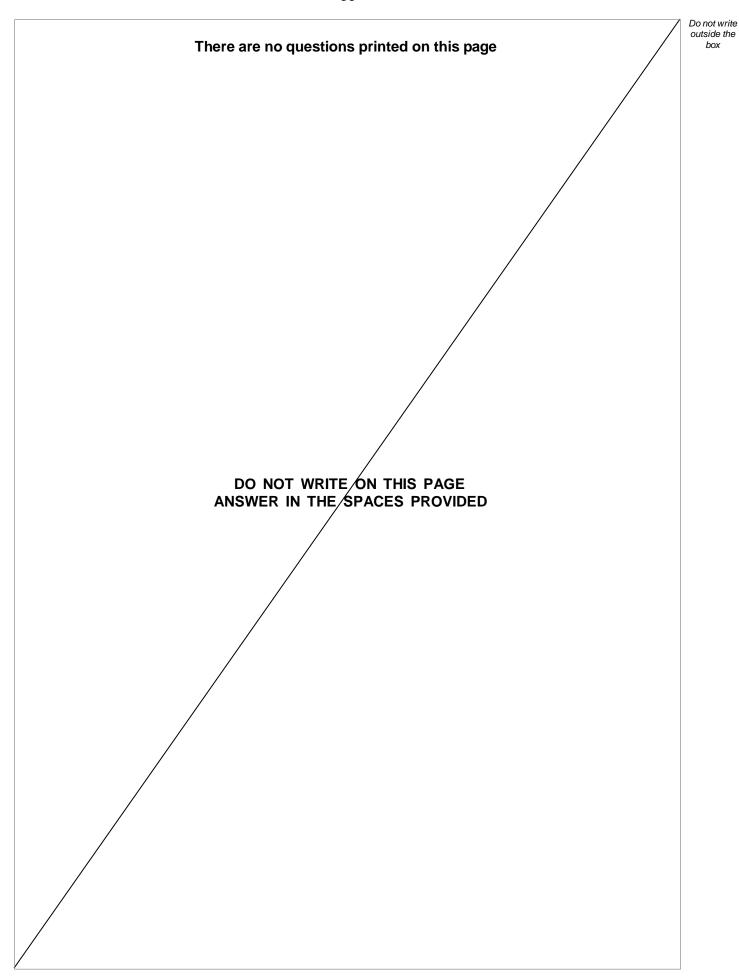

- none of the compounds contain both nitrogen and potassium so a mixture is needed
- (both) compound A (potassium chloride) and B (ammonium nitrate) should be used
- (both) compound A (potassium chloride) and C (diammonium phosphate) could be used

1 0 . 2	How is potassium chloride (compound <b>A</b> ) obtained from the Earth?	[1 mark]	Do no outsio bo
	mining		
1 0 . 3	Name <b>one</b> other compound that could be used instead of potassium chloride (compound <b>A</b> ) to give a similar improvement in agricultural productivity.	[1 mark]	
	potassium sulfate		
1 0 . 4	Nitric acid is needed to produce ammonium nitrate (compound <b>B</b> ).		
	Name a compound needed to produce nitric acid.	[1 mark]	
ı	ammonia		
1 0 . 5	Phosphate rock contains phosphorus compounds.		
	Plants absorb phosphorus from compounds dissolved in rainwater.		
	Suggest why phosphate rock <b>cannot</b> be used directly as a fertiliser.	[1 mark]	
	_phosphate_rock is insoluble in water		
1   0   6			
1 0 . 6	Phosphate rock can be treated with different acids to produce salts useful as fertilisers.		
	Name the salts which are produced by treating phosphate rock with:  • sulfuric acid		
	phosphoric acid.	[2 marks]	
	Sulfuric acid calcium sulfate		
	Phosphoric acid <u>calcium phosphate</u>		1
