GCSE BIOLOGY

Paper 2F

Foundation Tier

Time allowed: 1 hour 45 minutes

Materials

For this paper you must have:

- a ruler
- a scientific calculator.

Instructions

- Use black ink or black ball-point pen.
- Pencil should only be used for drawing.
- Fill in the boxes at the top of this page.
- Answer all questions in the spaces provided.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do all rough work in this book. Cross through any work you do not want
- In all calculations, show clearly how you work out your answer.

Information

- The maximum mark for this paper is 100.
- The marks for questions are shown in brackets.
- You are expected to use a calculator where appropriate.
- You are reminded of the need for good English and clear presentation in your answers.

Answer all questions in the spaces provided. The theory of evolution states that organisms alive today evolved by natural selection from other species that are now extinct. Which two scientists proposed the theory of evolution by natural selection? Tick () two boxes. Alexander Fleming Alfred Russel Wallace Carl Linnaeus Carl Woese Charles Darwin

Fossils provide evidence for evolution.

Figure 1 shows a fossil footprint of a dinosaur.

Figure 1

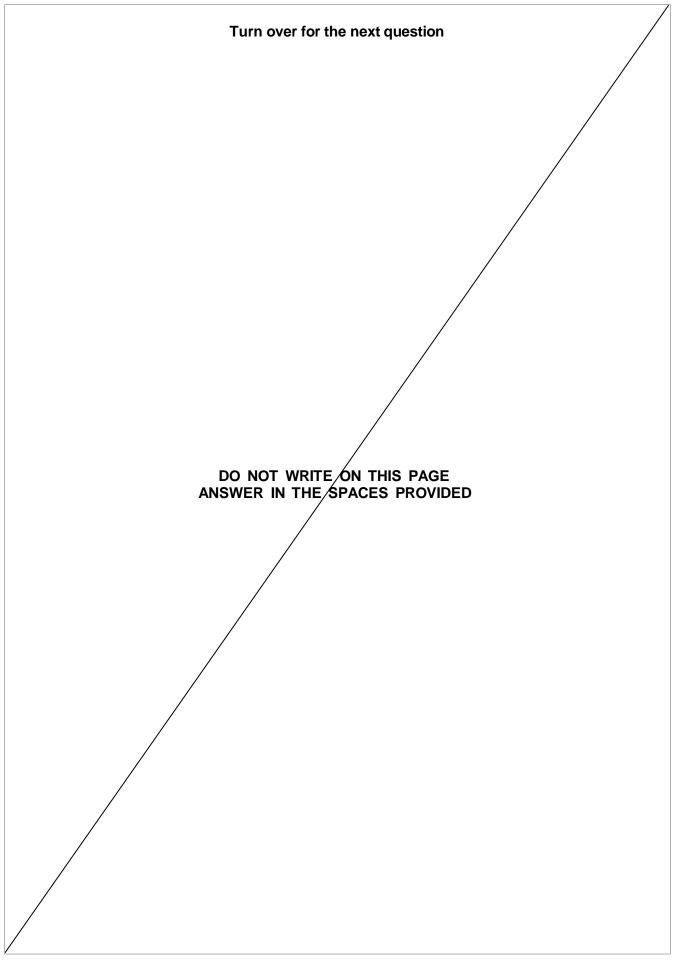

0 1 . 2	What is a fossil?	[2 marks]
	remains of an organism from a long time ago	
0 1.3	How was the fossil in Figure 1 formed?	
. 3		[1 mark]
	Tick (✓) one box.	
	Body parts were replaced by minerals.	
	The animal walked on mud.	
	The animal was frozen in ice.	
0 1 . 4	Dinosaurs are extinct.	
	Give two causes of extinction.	[2 marks]
	flooding OR drought OR ice age OR global warming	
	2 volcanic activity OR asteroid collision	
	Question 1 continues on the next page	

0 1 . 5	Which two of the following provide evidence for evolution? Tick (✓) two boxes.	[2 marks]	Do not write outside the box
	Bacteria can become resistant to an antibiotic.		
	Early forms of life lived in the ocean.		
	Older fossils are simpler than more recent ones.		
	Older layers of rock are closer to the surface.		9

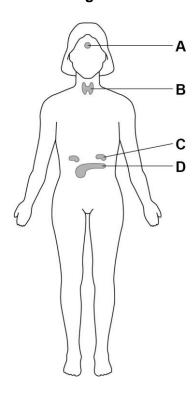

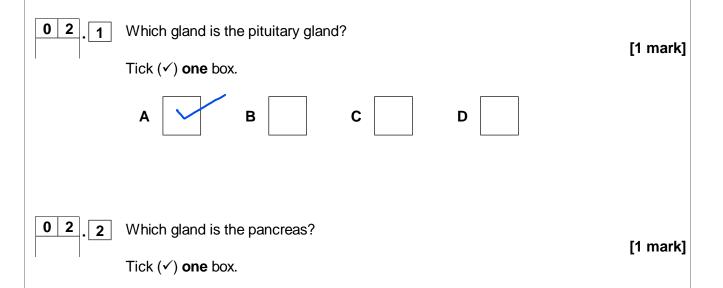

0 2 Many internal processes of the human body are controlled by hormones.

Hormones are produced by glands.

Figure 2 shows glands in a woman's body.

Figure 2

Α

В

	The hormone insulin helps to decrease the blood glucose concentration. Insulin causes its target organs to take in glucose from the blood.	
0 2 . 3	Which of the following is a target organ for insulin? Tick (✓) one box. Bladder Heart Liver]
0 2 . 4	The glucose is stored as an insoluble substance. What is the insoluble storage substance that is formed from glucose? Tick (✓) one box. [1 mark	J
	Glycogen Protein Urea	
	Question 2 continues on the next page	

Scientists investigated the effect of a glucose drink on the concentration of glucose in a person's blood.

This is the method used.

- 1. Take a small sample of blood from the person.
- 2. Measure the concentration of glucose in the person's blood.
- 3. Give the person a drink containing 50 grams of glucose.
- 4. Measure the concentration of glucose in the person's blood at intervals.
- 5. Calculate the **change** in blood glucose concentration from the starting value.

Figure 3 shows the results.

Figure 3 5 4 3 Change in blood glucose 2 concentration in mmol/dm³ 1 0 40 10 20 30 50 Time in minutes Time when glucose solution was drunk

	Figure 3 shows the change in blood glucose concentration.	b
0 2 . 5	At the start of the investigation, the blood glucose concentration was 5 mmol/dm ³ .	
	Calculate the highest blood glucose concentration during the investigation.	
	Use information from Figure 3 in your answer. [2 marks	.1
	2.6	ני
		_
	Highest blood glucose concentration = 7.6 mmol/dm³	
02.6	What is the time taken for the blood glucose concentration to decrease from its highest value back to the starting value? Use data from Figure 3 in your answer. [1 mark]	(]
	Time taken = minutes	_
0 2 . 7	Why can you not be certain that your answer to Question 02.6 is accurate? [1 mark points too far apart	:] - -
0 2 . 8	Figure 3 shows the results for a person who does not have Type 2 diabetes. Sketch a line on Figure 3 to show the results you would expect for a person who has Type 2 diabetes. [2 marks]	10
I	Turn over for the next question	•
	rain over for the heat question	

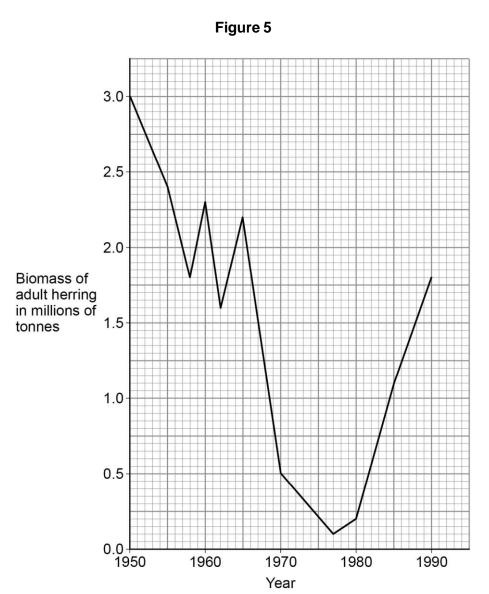

0 3 People eat fish caught in the North Sea. Figure 4 shows a food chain. Figure 4 Algae Herring Small Human animals Not to scale The algae make glucose by photosynthesis. 0 3 . 1 Which two substances do the algae need for photosynthesis? [2 marks] Tick (✓) **two** boxes. Carbon dioxide Nitrogen Oxygen Starch Water

0 3.2	What is the source of energy for photosynthesis?	1
	Tick (✓) one box.	
	Light	
	Mineral ions	
	Protein	
	Water	
0 3.3	Which pyramid of biomass is correct for the food chain shown in Figure 4 ? [1 mark]
	Tick (✓) one box.	
[
	Question 3 continues on the next page	

Figure 5 shows the biomass of adult herring in the North Sea between 1950 and 1990.

0 3.4	Too many herring were caught in the 1960s.
	Calculate the percentage decrease in the biomass of adult herring between 1960 and 1970.
	Use the equation:
	percentage decrease = $\frac{\text{(biomass in 1960 - biomass in 1970)}}{\text{biomass in 1960}} \times 100$
	Give your answer to the nearest whole number. [4 marks]
	$= \underbrace{(2.3 - 0.5) \times 100}_{2.3} \times 100$
	=78.2(6087)
	=78
	Percentage decrease = %
	From 1977, laws were introduced to help conserve herring.
0 3	Describe the change in biomass of adult herring from 1977 to 1990.
	Use data from Figure 5 in your answer. [2 marks]
	increase in biomass of herring from 0.1 to 1.8 million tonnes
	Question 3 continues on the next page

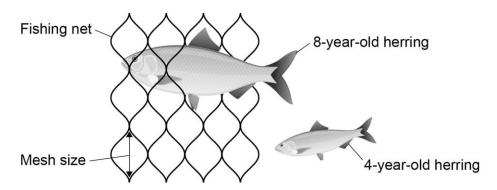

0 | 3 . 6

One of the laws was to control mesh size of fishing nets.

Figure 6 shows a fishing net with a legal mesh size.

Herring can live for up to 12 years.

Herring start to reproduce when they are 3 to 4 years old.

Explain how the control of mesh size of fishing nets has helped to conserve stocks of herring.

[2 marks]

smaller / 4-yr-old fish not caught (so) escaping fish can reproduce

0 | 4 . **5** An insect flies near a person's eye. The person blinks. This is a reflex action.

Figure 8 shows the coordination system for this reflex action.

Figure 8

Complete Figure 8.

[2 marks]

9

Choose answers from the box below.

Write one word in each of boxes 2, 3 and 4 of Figure 8.

brain cornea iris muscles retina

0 5	Potato blight is a disease of potato plants.
	Potato blight is caused by the fungus Phytophthora infestans.
0 5 . 1	What is the genus of the fungus that causes potato blight? [1 mark] Tick (✓) one box.
	infestans
	Phytophthora
	Phytophthora infestans
0 5 . 2	The fungus grows near the surface of the potato.
	How does growing near the surface help the fungus to respire? [1 mark]
	Tick (✓) one box.
	The fungus can get nitrogen from the soil.
	The fungus can get oxygen from the air.
	The fungus can get water from the potato.
	Question 5 continues on the next page

	A farmer sprays his potato plants with a pesticide.
	The pesticide kills the fungus that causes potato blight.
	Spraying the crop with a pesticide could decrease biodiversity in a river flowing through his farm.
0 5.3	What does 'biodiversity in a river' mean? [1 mark] Tick (✓) one box.
	The variety of species of animals in the river.
	The variety of species of organisms in the river.
	The variety of species of plants in the river.
0 5 . 4	The farmer sprayed pesticide on his potato plants. The next day it rained heavily. Explain why the biodiversity in the river decreased. [2 marks] pesticide washed into river and pesticide kills (some) organisms / plants / animals in river
	Another method of preventing potato blight is to breed potatoes that are resistant to blight. Resistance to potato blight is controlled by two alleles: R = a dominant allele for having resistance to blight. r = a recessive allele for not having resistance to blight.
	A scientist crosses two potato plants. Each plant has the genotype Rr .

		Fig	ıre 9		
			Male g	ametes	
			R	r	
	Female	R	RR	Rr	
	gametes	r	Rr	rr	
0 5 . 6	Draw a ring around one of the homoz	ygous	genotyp	es in Fiç	gure 9. [1 mark]
0 5	What percentage of the offspring in F	igure	9 will be	resistant	to potato blight?
	Tick (✓) one box. 25% 50% 75%	6 \	10	00%	
0 5.8	Potatoes from one plant can be planted in the ground to produce new potato plants.				
	All the new plants from a parent plant to blight.	t that	s resista	nt to blig	ht will also be resistant
	Explain why.				[2 marks]
	no fusion of gametes or asexual repro	oductio	n involve	es mitosis	so offspring are genetically
	identical to parent plant				

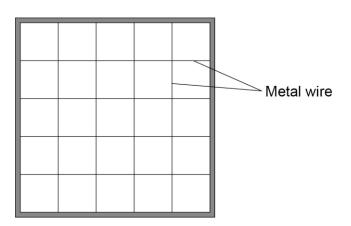

0 6 A student estimated the percentage cover of buttercup plants in a field.

The student used a quadrat.

The quadrat was divided into 25 equal squares.

Figure 10 shows the quadrat.

Figure 10

This is the method used.

- 1. Place the quadrat on the ground.
- 2. Record how many squares in the quadrat contain buttercup plants.
- 3. Place the quadrat in a new position in the field.
- 4. Record how many squares in the quadrat contain buttercup plants.
- 5. Repeat steps 3 and 4 another three times.

0 6.1	What method should the student have used for placing the quadra Tick (\checkmark) one box.	t? [1 mark]
	Place the quadrat where there are many buttercup plants.	
	Place the quadrat only where there are no trees.	
	Place the quadrat using random coordinates.	
	Use the same person to place all the quadrats.	

The student calculated the percentage cover of buttercup plants for each quadrat.

Table 1 shows the student's results.

Table 1

Quadrat number	Number of squares containing buttercup plants	Percentage cover of buttercup plants	
1	10	40	
2	13	52	
3	22	88	
4	20	80	
5	10	40	
	Mean	х	

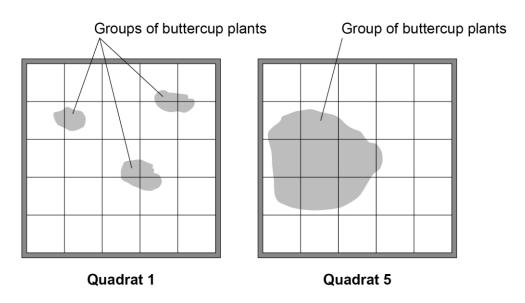

0 6.2	Calculate mean value X in Table 1 .	[2 marks]
	40 + 52 + 88 + 80 + 40/5	
	or 300/5 =60	
	X =	%
	Question 6 continues on the next page	

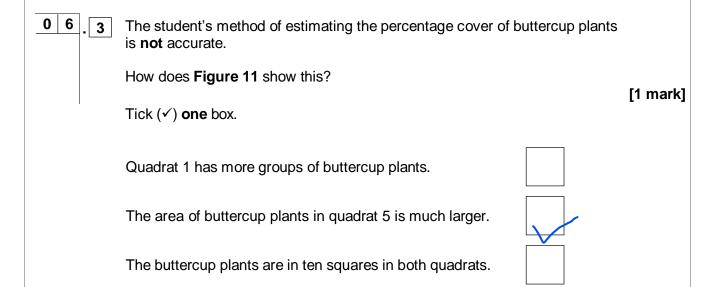

Table 1 shows that quadrat **1** and quadrat **5** each had 40% cover of buttercup plants.

Figure 11 shows the results for quadrat 1 and quadrat 5.

Figure 11

0 6	The student wanted to get a more valid estimate of the percentage cover of butteroplants in the field.	outside box
	Suggest two improvements to the method to make the results more valid. [2 mag)	arks]
	1place (many) more quadrats	
	2 <u>divide quadrats into more / smaller squares</u>	
0 6 . 5	Give three environmental factors that would affect the growth of buttercup plants in a field.	
	[3 ma	ırks]
1 1	1 light	
	water 2	
	3minerals / ions / salts	9

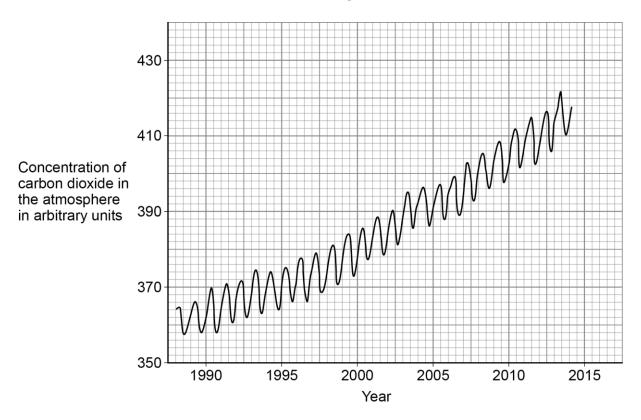

Turn over for the next question

0 7

Scientists are very concerned about the changes in concentration of carbon dioxide in the Earth's atmosphere.

Figure 12 shows the concentration of carbon dioxide in the atmosphere between 1988 and 2014.

Figure 12

0 7

1 Describe **two** patterns shown in **Figure 12**.

Use data from Figure 12 in your answer.

[4 marks]

1	(overall) increase (in concentration of CO2)
	,
	(overall increase) by 54 (arbitrary units)
	or
	from 364 to 418 (arbitrary units)

2 peaks and troughs :each cycle is 1 year

0 7 . 2	Give two human activities that affect the concentration of carbon dioxide in the atmosphere.
	[2 marks
ı	1
	combustion
	2 deforestation
	2 <u>deforestation</u>
7.3	The trend shown in Figure 12 may continue for many years.
	Explain what effect the changing concentration of carbon dioxide in the atmosphere
	could have on living organisms. [4 marks
,	• (higher CO2 concentration causes) global warming
	• plants photosynthesise faster
	o due to more CO2 o due to higher temperature
	temperature rise causes changes in rainfall patterns or extreme
	weather conditions such as storms
	less rainfall causes desertification many plant energies dis out
	o many plant species die out o many animal species lack food and die
	o other (drought-adapted) plants become more common
	more rainfall causes flooding
	o loss of habitat o may lead to extinction
	temperature rise melts (polar) ice caps or glaciers
	o causes flooding
	o loss of habitat o may lead to extinction
	changes in animal / bird migration patterns / times
	or changes in distribution of animals

10

0 8 The nucleus of a cell contains DNA.

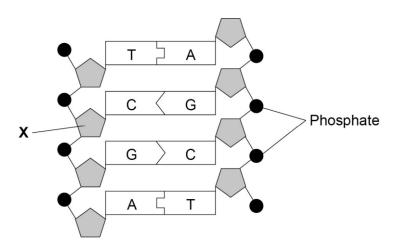

0 8 . 1 Name the structures inside the cell nucleus that contain DNA.

[1 mark]

chromosomes

Figure 13 shows part of a DNA molecule.

Figure 13

0 8 . 2 Name the part of the DNA molecule labelled **X**.

[1 mark]

sugar

0 | 8 . 3 What type of substances are labelled A, C, G and T in Figure 13?

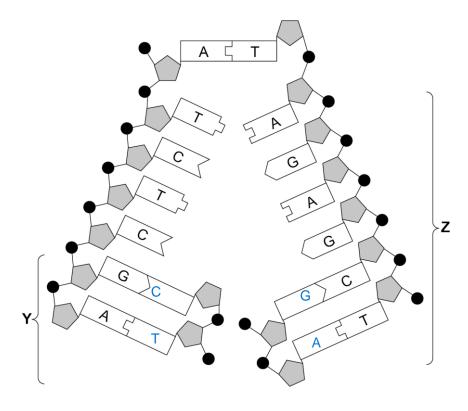

[1 mark]

Bases

Four of the substances you named in Question **08.3** are **not** labelled in part **Y** of **Figure 14**.

Label each of these substances with the correct letter, A, C, G or T.

Use information from other parts of Figure 14 to help you.

[1 mark]

0 8 . 5 What is happening to the DNA in part **Z** of **Figure 14**?

[1 mark]

Tick (✓) one box.

Differentiation

Evolution

Fertilisation

Replication

A student investigated the effect of temperature on the decay of milk.

Figure 15 shows the apparatus the student used.

Figure 15

This is the method used.

- 1. Set up the apparatus as shown in Figure 15 with the milk at 20 °C.
- 2. Record the pH over 5 days using the computer.
- 3. Repeat with another batch of fresh milk at 25 °C.

[1 mark]

put beaker in a water bath

0 9 .

2 Give **one** variable the student should keep constant.

Do **not** refer to temperature in your answer.

[1 mark]

volume of the milk

Question 9 continues on the next page

Table 2 shows the student's results for the milk at 20 °C.

Table 2

Time in days	0	1	2	3	4	5
рН	6.7	6.7	6.3	5.3	4.6	4.4

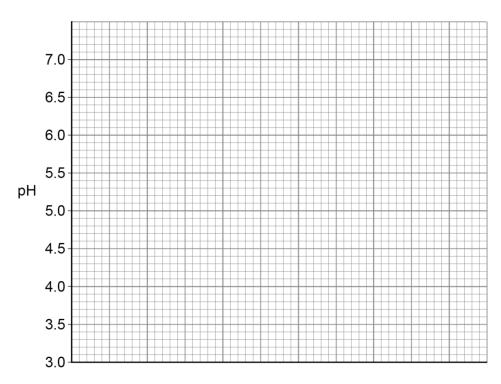

0 9 . 3 Complete Figure 16.

[4 marks]

You should:

- label the x-axis
- use a suitable scale for the x-axis
- plot the data from Table 2
- draw a line of best fit.

Figure 16

0 | 9

The data you plotted in Question **09.3** were obtained at 20 °C.

Sketch a line on Figure 16 to show the results you would expect at 25 $^{\circ}\text{C}.$

Label this line '25 °C'.

[2 marks]

1	0

Human body temperature is controlled within very narrow limits.

Scientists investigated the effect of drinking ice-cold water on:

- internal body temperature
- the rate of sweating.

This is the method used.

- 1. Sit a person inside a room kept at a constant temperature of 25 °C.
- 2. Measure the person's internal body temperature near the brain.
- 3. Measure the person's rate of sweating.
- 4. After 20 minutes, give the person 500 cm³ of ice-cold water to drink.
- 5. Continue to measure the person's internal body temperature and sweating rate for a further 50 minutes.

_				-
	1	_	0	1
	1		U	1

Give the reason why the person should **not** move during the investigation.

[1 mark]

movement would release extra heat

Question 10 continues on the next page

Figure 17 and Figure 18 show the scientists' results.

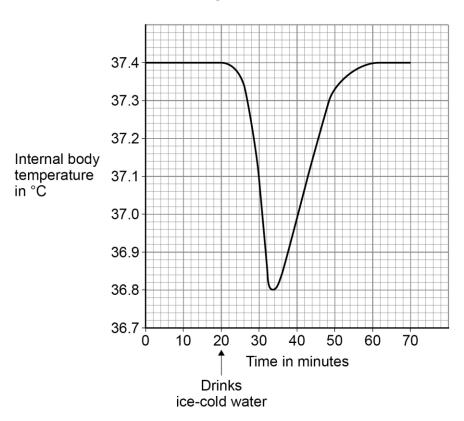

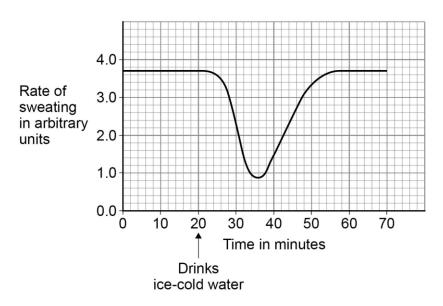

Figure 18

1 0 . 2	What is this person's normal internal body temperature? [1 mark]
	Tick (✓) one box.
	36.8 °C 37.0 °C 37.4 °C
	The results show that when the ice-cold water was drunk, the temperature near the brain decreased.
1 0 . 3	Explain why the temperature near the brain decreased.
	blood is cooled at stomach / mouth cooled blood flows to the brain
10.4	The thermoregulatory centre in the brain responds to the decrease in temperature. How does the thermoregulatory centre send information to sweat glands in the skin? [1 mark] via nerves / neurones
1 0 . 5	The rate of sweating changes between 24 minutes and 36 minutes. Explain how this change helps to maintain the person's normal body temperature. [2 marks] less sweating occurs so less heat is lost or less cooling
	Question 10 continues on the next page

			Do not write
1 0 . 6	During exercise, the skin appears red.		Do not write outside the box
	What causes the skin to appear red?	[1 mark]	
	Tick (✓) one box.	[

Decay occurs in a compost heap.

Figure 19 shows a compost heap.

Figure 19

Describe:

- how microorganisms in the layers of soil help to recycle chemicals in the dead plants
- how the chemicals are used again by living plants.

[6 marks]

in microorganisms

- digestion or large molecules to small molecules
- enzymes or named example
- respiration
- production of carbon dioxide
- release of mineral ions or named example such as nitrate / phosphate / magnesium

in plants

- carbon dioxide (from air) taken in by leaves
- by diffusion
- via stomata
- carbon dioxide used in photosynthesis
- making glucose / sugar / starch / cellulose or making other

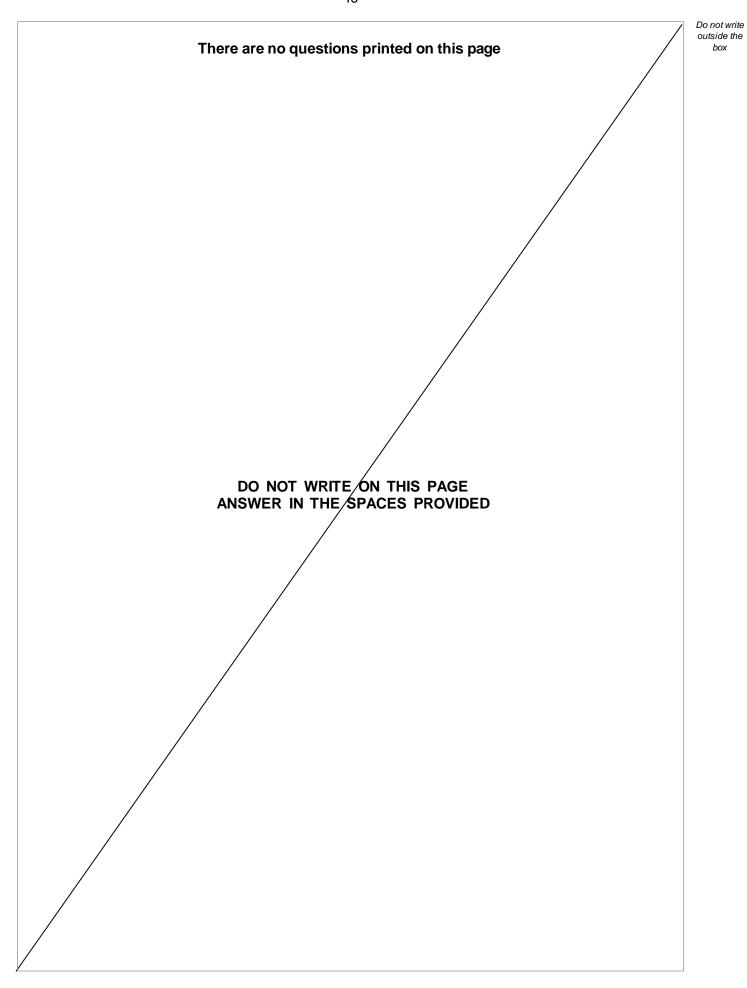

correctly named example

- (named) ions taken in by roots
- by active transport
- nitrate ions for making amino acids / proteins / DNA / chlorophyll
- phosphate for making DNA
